

Split Hopper Barge (x2)

The Split Hopper Barges are intended for spoil transport to under water sites, or for backfilling underwater pipeline trenches.

The split hopper barge is a single deck vessel with hopper in the middle and a steel hull, which opens along the centre plane.

The two sister split hopper barge is capable of the following works:

- Spoil up-take from dredge
- Back filling of trenches with underwater pipelines
- Spoil transport and off loading to underwater dump sited
- System of floating technical facilities for underwater pipeline burial and off shore dredging
- Multipurpose vessel for underwater engineering and diving activities
- Special – purpose vessel for underwater pipe line repair

Specifications

Length overall	20m
Freeboard	2m
Draft (unloaded)	.5m
Hopper Length	14m
Cargo Capacity	19m3
Propulsion	Push/ pull
Door open/ close	Hydraulic - by external power
